

## Emergency Stop Buttons • Surety Adaptor • Legend Plate

40102-312

### Features/Applications

In response to the industry demand for higher quality and better performing safety products, Rees has developed a normally closed contact block permanently attached to a surety adaptor for use on our 30.5 mm PB Operators. The O.U.R. (Opens Upon Removal) block ensures that the normally closed contact will open when the E-stop is actuated or becomes removed from the operator. The part number for the O.U.R. block/surety adaptor is 52702-000. Part number 40102-312 shown in the picture comes assembled with two of these blocks.

Also shown are samples of additional heavy duty 30.5 mm and flush mounted E-Stop switches. These switches are available in a variety of contact configurations and lockable provisions.

For additional information please refer to our online catalog or contact us directly.

02182-002*	Palm Button Red Plunger	Positive Break Contacts Maintained	NO + NC NEMA 12/13, IP 65	Lockable in the "Off" position
40102-102	30.5 mm Red Plunger	Positive Break Contacts Maintained	NO + NC NEMA 12/13, IP 65	Lockable in the "Off" position
40102-122	30.5 mm Red Plunger	Positive Break Contacts Maintained	(2) NO + (2)NC NEMA 12/13, IP 65	Lockable in the "Off" position
40102-312	30.5 mm Red Plunger	Positive Break Contacts Maintained	(2) NC w/Adaptor Block NEMA 12/13, IP 65	Lockable in the "Off" position

\*Please note that using our 01004-005 spacer/adaptor to offset the E-Stop on our runbar will allow more space for insertion of a padlock.
